The Elegance Of Titanium Wedding Bands

As the years go by, people get to explore numerous options and means of expressing their ingenuity and craft in numerous fields. The wedding ring business is just among these. Newer types of valuable metals are introduced as good materials for [wedding bands](#). Among the popular ones is the titanium wedding band. Lately it's been marked as the de facto for the contemporary wedding ring designs. It was produced not to replace the traditional gold, silver and platinum ones but just to expand the product line for various options.

Specifically more wedding rings for men are created from titanium compared to those of ladies. And why is this so? Primarily because this sleek metal is so masculine in character. A few are made in dark to darkest gray tones to black resembling the palladium. The rings are tougher, lighter and a lot more sturdy as compared to other types. The availability of the titanium metal is abundant and since numerous industrial industries are creating numerous items out of it and a part of it is the processing of jewelry grade quality titanium. Numerous women also find titanium wedding bands eye-catching when it comes to its offered finishes because it is different from the vintage shiny wedding bands made from gold or silver.

The titanium ring's tough and hard quality is mainly because of its high melting temperature requirement that removes further wax casting method. It also does not call for goldsmithing or silversmithing method which is an incredibly tiresome job. Rings made from gold, silver and platinum are displayed with pretty wire works, elegant filigree work, intricate hand engraving, and shiny gem stones however all these ornamental works are not applied to titanium wedding bands. Titanium isn't malleable enough to allow such techniques on it. Only softer metal inlays of white gold or gold are best combined with titanium to make that stylish appearance.

The manufacturing procedure of titanium [wedding bands](#) involves extruding pipes from jewelry grade titanium. The pieces are cut into smaller blank rings and are then sized into standard thickness and diameter of ring sizes. This includes 7mm to 10mm for men's sizes and 4mm or bigger for women's sizes. The whole creating procedure of this kind of ring resembles much like less costly mass production method more than the complex jewelry craft. Nevertheless, the worth of the ring itself depends much on the type of finishing applied. There are finishes such as matte, satin, brushed and high polish applied on the rings. During this process, the rings are changed into the typical gray, and some multicoloured ones.

Wedding rings are not just everyday gifts, they are a symbol of love and lasting commitment therefore shopping for one ought to be carried out with extra care. Titanium [wedding bands](#) adorned or combined with other softer metals like gold, sterling silver, platinum, and chalcedony are currently one of the favourites for it produces variance in colour. Regardless of the design or style of your wedding ring, it is suggested to make it simple and less complex to withstand the test of time. The online world may also supply a multitude of options of wedding bands, however it would still be you who'll use it for a lifetime so consider the three significant factors: durability, style and comfort. It is a symbol of possessions. The circle in it denotes eternity and undying adoration for an individual, thus the most necessary part is to don it often.
